

AfterMail for PrestaShop

AfterMail for PrestaShop is a flexible e-mail module giving the shop owner the possibility to automatically send e-mails to their customers after an order was placed or an order gets into a certain state.

Example of use

- Send any type of rating request mails. Add dynamic generated links containing, Mail address, order id or other parameters.
- Send extra information for certain products
- Send a reminder for subscription type products
- Send serial numbers/ texts / documentation / vouchers of partners / etc. for certain products

Features

- Send any type of attachments which are. For every customer language a different one if required!
- Send in different languages: Every available language is possible. Valid for attachment, Mail text and subject.
- Define a delay of the Mail delivery: useful i.e. for rating requests, which could be sent after 1 or 2 weeks after shipping.
- Define flexible product filter: Should a mail be sent with every order or only order with certain products or even variants of products. Everything and in combination is possible!
- Define text or HTML - mails or both. The system settings are used to send mails.
- The system settings (SMTP, PHP Mail, txt, HTML, etc.) are used to send e-mails.

- Mail Log: Keep on track of the current e-mails which going to be or are already sent.

Documentation

Installation

The module must be installed as any other common module in the admin-> module section.

Configuration

1. Search for the AfterMail module in the module section and click on "configuration". Here you can see the dynamically created URL which you need for the Cron Job URL call.
2. The module installs a new menu item under "customers" called "AfterMail".
3. "New" creates a new mail configuration
4. Define a significant name.
5. Define the delay in minutes. After this duration a mail will be marked as "ready to send".
6. Trigger: Select from different possibilities when a mail should be created: Either right after creation of a new order or at the point when an order has a certain state.
7. If you need, you can select an attachment which will be sent with the mail. For every language one. You define attachments with the standard system tools at the products tab.
8. Define a subject, please do this for every active language.
9. Write the text of the mail. You might use copy and paste of existing system mails to keep the design.
10. There are certain variables available which can be used in the usual way:
 - {email} : Mail address
 - {lastname}: Lastname
 - {firstname}: Firstname
 - {id_order}: Order ID
 - {id_customer}: Customer ID
 - {birthday}: Birthday
 - {shop_logo} : Shop Logo
 - {mail_footer_html}: Mail footer
 - {delivery_company}
 - {delivery_block_txt}
 - {delivery_firstname}
 - {delivery_lastname}
 - {delivery_address1}
 - {delivery_address2}
 - {delivery_city}
 - {delivery_postal_code}
 - {delivery_state}
 - {delivery_phone}
 - {delivery_other}
 - {invoice_block_txt}
 - {invoice_company}

- {invoice_vat_number}
- {invoice_firstname}
- {invoice_lastname}
- {invoice_address2}
- {invoice_address1}
- {invoice_city}
- {invoice_postal_code}
- {invoice_country}
- {invoice_state}
- {invoice_phone}
- {invoice_other}
- {total_wrapping}
- {total_shipping}
- {total_discounts}
- {total_products}
- {total_paid}
- {discounts}
- {products}
- {payment}
- {carrier}
- {date}
- {order_name}
- more on request

If a voucher was generated

- a. {voucher_amount}
- b. {voucher_days}
- c. {voucher_validtil}
- d. {voucher_num}

- Please let the mail as deactivated and save the mail
- Edit the just created mail and configure the filter settings, which weren't visible before.
- Click at "Add filter" and select:
 - (1) One, several or all categories.
 - (2) If you have chosen one category, you might choose between products of this category.
 - (3) If you have chosen one product, you might choose between variants of this product.
 - (4) Now save the filter which should be visible in the list now. You can add more filters if required or edit an existing one.
- Don't forget to activate the configuration.

Notes

No e-mails will be sent twice during one order. If you have defined a mail which should be sent to all products of a category and a customer buys 2 products of the category, only one mail will be sent.

The mail queue is checked as often as you have your cron job defined. So it is possible to have a mail which has a delay of 5 minutes, but the cron job is running only every 10 minutes that the mail will be sent after 10 minutes.

The mails will be sent in the language, the customer made his order.

System requirements

- PrestaShop Version 1.6x or higher - Availability of a cron job: external services might be used for this

Languages

The module is available in English and German language. More languages on request.
