

AUTOTRANSLATOR

Installation and configuration guide

Installation

This module is installed in a regular way. Simply upload your archive and click install.

Setting up Translation Provider (Translation Engine)

First of all you should connect a Provider that will be responsible for processing automatic translations. You can select one of the following Providers: **Yandex**, **Watson (IBM)**, **Google** or **Microsoft**. In order to connect a provider you should specify API Key (and other credentials if required).

Select translation provider

Yandex.Translate

Pricing options  Free package available: 1 000 000 chars/day | 10 000 000 chars/month

API key

Insert API key here

[How to get API key !\[\]\(d3102649f02e825ddb76dc3de0190154_img.jpg\)](#)

The process of obtaining API credentials is described below fields that should be filled in. The easiest provider to connect is **Yandex**. All you have to do is to log in to their service page, accept User Agreement and click **Get API Key**. Obtaining credentials for other providers is not complicated either, but requires more steps.

NOTE: **Google** and **Microsoft** may require your credit card information in order to register a billing account.

Translating different resources

After connecting Translation Provider, you can start translating different resources of your store. Current module version allows you to add automatic translations for the following resources:

- Products
- Categories
- Attribute Groups and Attributes
- Features and Feature values
- CMS Pages
- CMS Categories
- Manufacturers
- Suppliers
- SEO and URLs (Shop Parameters > Traffic & SEO)
- Amazing blog categories and articles (if module is installed)

- Simple blog categories and articles (if module is installed)
- Home text editor module content (if module is installed)

After selecting a resource type you will see a list of available items that are ready to be translated. If you select **Products**, you will have possibility to filter them by categories/manufacturers.

☐ 8 Mug Today is a good day	FR: 100%	PT: 0%	Translate
☐ 7 Mug The adventure begins	FR: 100%	PT: 0%	Translate
☐ 6 Mug The best is yet to come	FR: 100%	PT: 0%	Translate
☒ 5 Today is a good day Framed poster	FR: 100%	PT: 10%	Translate
☒ 4 The adventure begins Framed poster	FR: 100%	PT: 0%	Translate
☒ 3 The best is yet to come' Framed poster	FR: 100%	PT: 9%	Translate
☒ 2 Sweater	FR: 100%	PT: 33%	Translate
☒ 1 Hummingbird printed t-shirt	FR: 100%	PT: 67%	Translate

10 of 20 [←](#) [1](#) [2](#) [→](#) ☐ CHECK ALL [BULK TRANSLATE \(5\)](#)

You can translate items one by one by clicking the **Translate** button in each row, or you can make a bulk selection and translate multiple items in one click.

NOTE: Translations are saved in a native way, same as if you added them manually on product sheet and clicked **Save** button. After translations are ready, you can edit them in a regular way like you edit any other multilingual field of products, categories, attributes, etc...

Overriding existing translations

By default this module translates only **empty** fields, or fields having **same value** as original. If a field is not empty and it has a value that is different from original, it will be considered as translated, so it will not be translated again. If you want to update translations for fields that are already translated, you have to uncheck the following option:

TRANSLATE

Products

All fields

☒ Translate **only empty** fields or fields with **same value** as original

Translation ratios

You will notice translation ratios in each product row. This data represents ratio of non-empty fields in original language compared to number of translated fields in another language.

The adventure begins Framed poster	FR: 100% PT: 0%	Translate
The best is yet to come' Framed poster	FR: 100% PT: 9%	Translate
Sweater	FR: 100% PT: 33%	Translate
Hummingbird printed t-shirt	FR: 100% PT: 67%	Translate

NOTE: if a field has the same value in both languages, first time it will be considered as **not translated**. For example you have a product called **iPhone X**. This name can be same in many languages. So when this item is listed for the first time, its name will be considered as **not translated**, so translation ratio will be less than 100%. But if you translate this product using autotranslator, module will remember the repeating translation value, and next time this name will be considered as **translated**. So, if other fields are translated too, the ratio will be 100%.

Translation directions

Yandex, **Google** and **Microsoft** support translations for most languages in both directions. If a language is not supported by selected provider, you will see a notification.

Watson (IBM) recognizes most languages, but it doesn't support all translation directions. Mainly it supports translations **from/to English**. Other language pairs may not be supported. For example it can translate from **English to French**, and from **English to Portuguese**. But it can not translate from **French to Portuguese**. If you select **Watson (IBM)** provider, and there are some unsupported translation directions among languages installed on your store, you will see a notification:

Some translation directions are not supported : fr→pt, pt→fr

Supported translation directions are: en→fr, en→pt, fr→en, pt→en

Select translation provider

Watson Ttranslate (IBM)

NOTE: If you want to translate to a language that is not installed in your store, you should add it in a regular way: either import language pack data in **International > Localization** menu, or add language manually in **International > Localization > Languages** menu.

Translation limits

All translation providers available in current module version offer free or trial packages. These packages have some limits and they are different for each provider. For example **Yandex** allows you to translate 10 million chars/month, but not more than 1 million chars/day for free. **Microsoft** offers a free limit of 2 million chars/month. **Watson (IBM)** offers a free limit of 1 million characters/month. **Google** doesn't offer a free translation limit, but it offers you a 300 USD credit on first registration. This credit can be used for automatic translations.

If you want to translate above limits, you can switch to paid plan of selected Provider on their service page. Pricing details as well as free package informations are available below selected provider option:
